* My Friends may wonder, What am I intending to do with all this?

•All are aspects of my personal interests & Hobbies.

* I have the formula and the industrial manufacturing production process for a new kind of synthetic Graphene fiber that has multi applications;

•This may require me to share manufacturing technology for out-sourcing with certain allied manufacturers:

•My Graphene fiber's formula, Can be made into fabrics that are flexible or rigid;

•Can also be made for same applications as carbon fiber products;

•Is 1000 times stronger than any known steel & 1000% lighter than steel.

•Except My Graphene fiber's properties can be engineered to be electrically conductive, dielectric, and, semi-conductive; can contain Nano electronic circuitry.

• As for the Other Buildings & Biotechnology laboratory;

I have several Genomics theorems that I want to experiment upon.

•The Metal, Wood & Materials Science work area;

•I will also need external out-sourcing access to an inert gas Electric Arc Furnace that can reach temperatures beyond 4000+°f, to produce special exotic metal alloy projects.

•I plan to design & build Boats & Experimental specialized types of vertical take-off Aircraft.

* I do have my own funding. However added external Funding & Grants maybe required.

•I will file Applications for Gov't grants & external funding.

>* Form associate partnerships with Universities for their students to be involved in allied research projects at my property's labs & facilities; University participation is a good idea!

*Everything is all in GOD's Guidances, with relentless faith and hard progressive work efforts, anything can happen, Life's a Journey of many paths!
